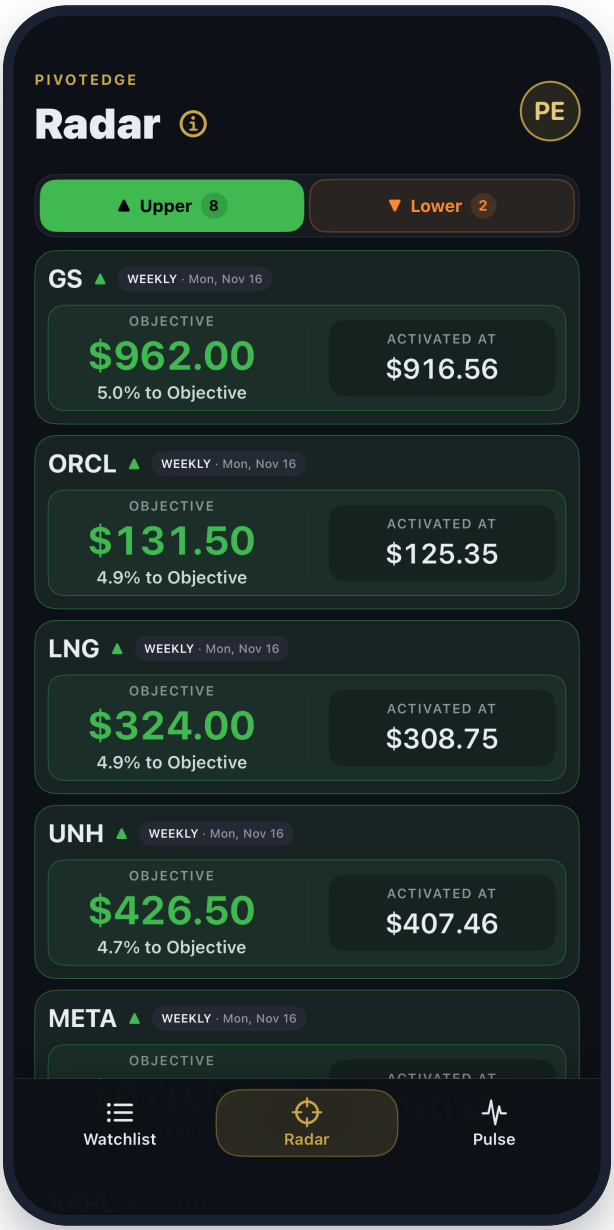
WELCOME

PivotEdge Quick Start

PivotEdge gives you structured market context for the symbols you follow: where a setup activated, the next reference level, and how far there is to go.

Context, not trade instructions. PivotEdge shows reference levels and what is happening around them. It does not tell you what to do and cannot promise any outcome.



W Watchlist
The symbols you follow, with closing prices and direction.

R Radar
Active Daily and Weekly setups, each with an Objective.

P Pulse
What is next to activate, what has activated, and what to review near the close.

A SIMPLE DAILY ROUTINE

MORNING
Check Radar
See the active setups and how much distance is left to each Objective.

DURING THE SESSION
Follow Pulse
Check Active, then Next Up.

NEAR THE CLOSE
Review Close Prep
Look over the Daily and Weekly setups as the session ends.

EVENING
Review Watchlist
Read the closing prices and direction for your symbols.

Radar refreshes each evening for the next session. Pulse begins after the first completed 30-minute interval and refreshes as the market develops.

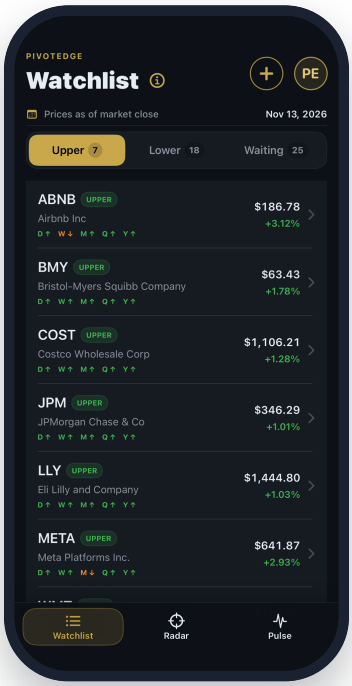
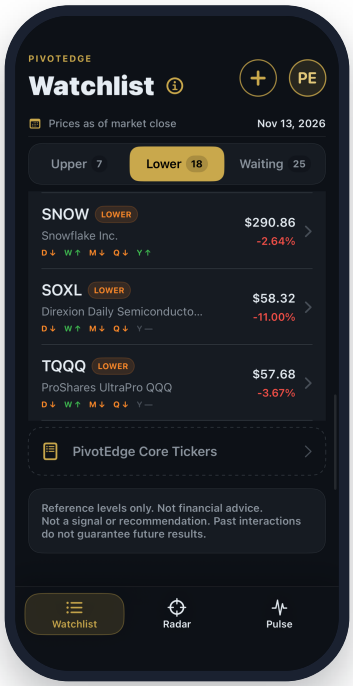
Build your Watchlist

Your Watchlist keeps you focused on the symbols you follow instead of the whole market. PivotEdge sorts them into three tabs.



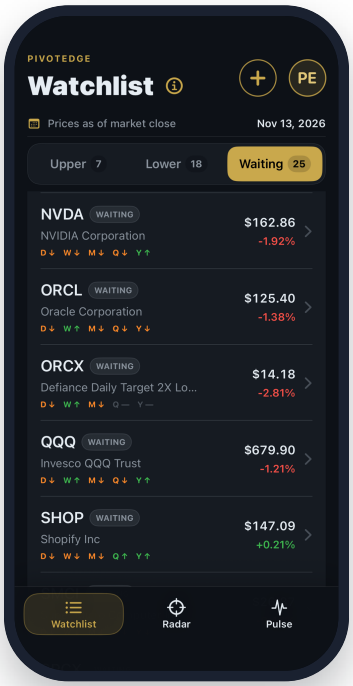
Upper

Symbols whose latest end-of-day analysis points up.



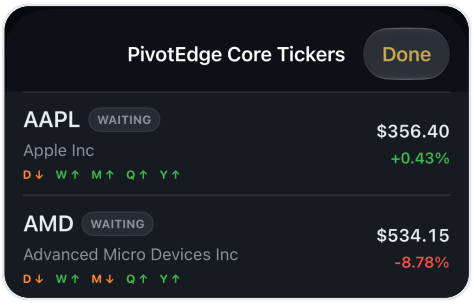
Lower

Symbols whose analysis points down. PivotEdge Core Tickers sits at the bottom of the list.



Waiting

Symbols without a clear Upper or Lower setup yet.



Add your first symbols

1. Open **Watchlist**. 2. Tap the **+** button at the top.
3. Search for a ticker, such as AAPL. 4. Add it to your Watchlist.

Not sure where to start? Open **PivotEdge Core Tickers** at the bottom of Watchlist to browse and search the list. It is browse-only: add the names you want with +.

Closing-price context

"Prices as of market close" shows the close each price comes from. The percentage is the change from the previous close.

Direction by timeframe

D, W, M, Q and Y show direction for Daily, Weekly, Monthly, Quarterly and Yearly. ↑ up, ↓ down.

Tip: start with five symbols. Pick five Core Tickers you know and add them with the + button.

Screens are examples. Levels, prices and dates change daily.

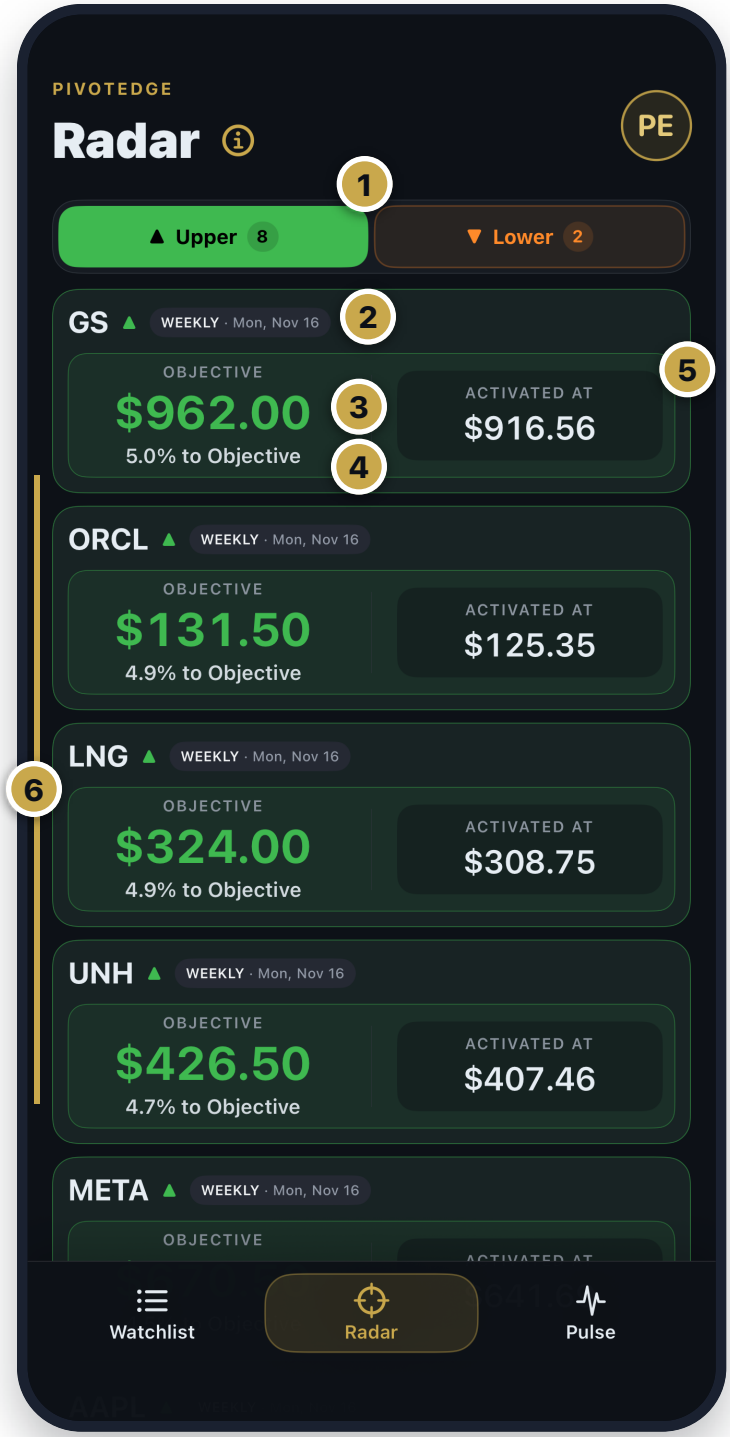
Radar

Radar lists the active setups, Upper and Lower, with the Objective for each. Open it in the morning to see where things stand.



1 Direction
Upper (green ▲) or Lower (orange ▼). The number beside each shows how many cards are in that list.

2 Daily or Weekly, and the session
The badge shows which timeframe the card comes from, with the session date it applies to.

3 Objective
The next reference level for the setup. PivotEdge caps the displayed Objective's distance from the Activated at price.

4 % to Objective
How much distance is left between the Activated at price and the Objective.

5 Activated at
The price recorded when the setup was confirmed.

6 Why cards are in this order
Cards with more remaining displayed distance to their Objective appear first. Radar shows up to ten cards, one per symbol.

Example
In this card, Activated at is $916.56 and the Objective is $962.00. That is a distance of about 5.0%, shown as "5.0% to Objective".

Tap **Lower** to see the other side. Lower cards work the same way, with the Objective below the Activated at price.

Screens are examples. Levels, prices and dates change daily.

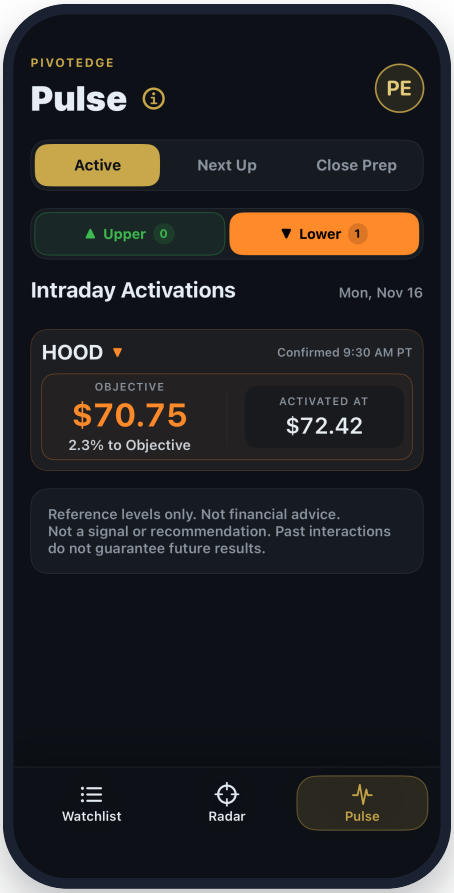
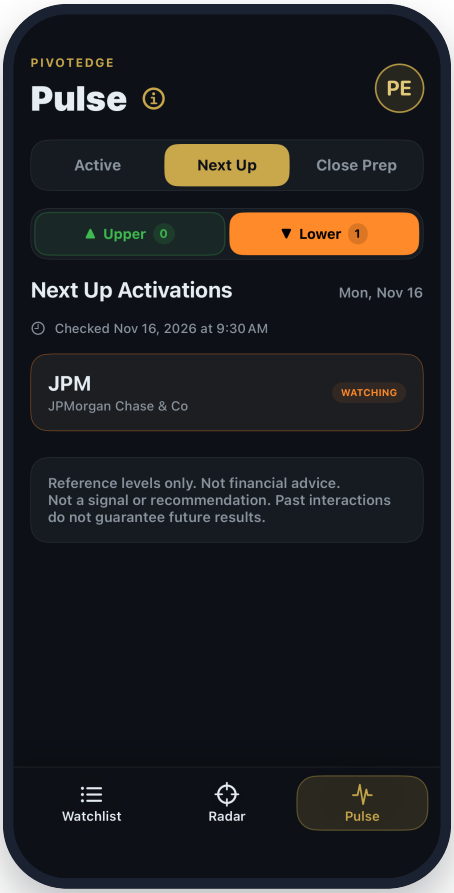
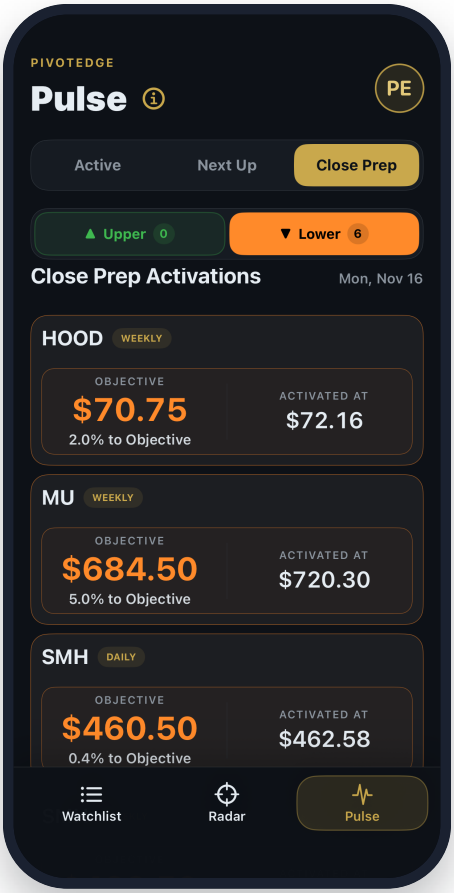
Pulse

Pulse follows the session. Check Active for setups that have confirmed, then Next Up for what may activate next. Not every setup becomes Active, and cards change as the market develops.







1 Active

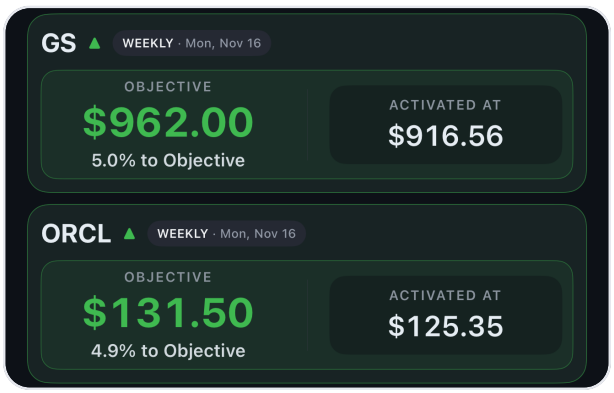
Activation has occurred. The card shows when it was confirmed, the Objective and the Activated at price.

2 Next Up

Setups approaching activation. A card here is marked WATCHING: it has not activated yet, and it may move to Active later.

3 Close Prep

Relevant context as the session approaches the close, with Daily and Weekly cards to review.



How Radar and Pulse fit together

Radar's Daily and Weekly setups come from end-of-day analysis, so you can plan before the session. Pulse reacts during the session: Active shows what has just confirmed, and Next Up shows what may activate next. Use Radar for the plan and Pulse for what is happening now.

Screens are examples. Levels, prices and dates change daily.

Questions and notes

Why didn't my setup become Active?

A setup becomes Active only when the market confirms the activation. Price can approach a level and turn back, so a setup can stay on Radar or in Next Up without ever activating. That is normal.

Why did a card change or disappear in Pulse?

Pulse follows the session and updates as it moves. Cards can appear, change or clear as the market develops, so check back during the day.

What is the difference between Radar and Pulse?

Radar shows the active Daily and Weekly setups. Pulse follows the session itself: Active shows setups that have confirmed, Next Up shows those approaching activation, and Close Prep covers the end of the day.

Do these levels tell me what to do?

No. They are reference levels and context. You decide what to do with them.

Quick help: tap the ⓘ next to Watchlist, Radar or Pulse for a short explanation of that screen.

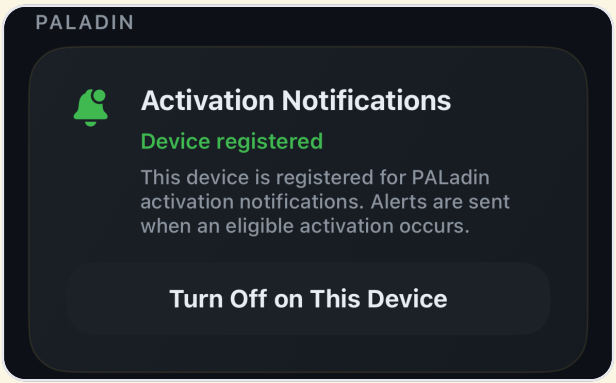
Enable Activation Notifications



1. Open **Account**.

2. Find **Activation Notifications** and tap **Enable on This Device**.

3. If iOS asks, tap **Allow**. If notifications were blocked, tap **Open iOS Settings** and turn on Notifications for PivotEdge.

PivotEdge sends a notification when an eligible activation is confirmed. Not every Radar setup becomes Active, so not every setup sends a notification.

PALadin notifications are powered by PivotEdge Adaptive Logic (PAL).

LABELS YOU WILL SEE ON A CARD

Objective
The next reference level for the setup.

Activated at
The price recorded when the setup was confirmed.

% to Objective
The distance left from the Activated at price.

DAILY / WEEKLY
The timeframe the card comes from.

Upper / Lower
Green ▲ or orange ▼.

WATCHING
In Next Up: not activated yet.

Important. PivotEdge LLC provides reference levels and market context for information only. It is not financial advice, not a signal or recommendation, and not a promise of any result. Past interactions do not guarantee future results. Always make your own decisions and manage your risk.
